The code for the NLP checkpoint is placed in the src folder. It is important to install the BERTopic package before running the code. This can be done by running the following command in the Google colab python notebook -

```
!pip install bertopic
```

The question focussed in this checkpoint is -

- Amongst officers who belong to a rank that is in the top 10 ranks with the maximum allegation counts, what are the different topics that can be modelled on the allegation text?
